How to get a professional look.

1. Compact and level the sub-base.

2. Backfill with 4" to 10" (100-250mm) of 3/4" minus road mulch or equivalent compacted granular fill.

3. Spread 1" (25mm) of concrete sand over fill. Avoid walking on the prepared base as this may cause the finished surface to be uneven.

4. Place Pacific Slate Standard Series pavers in the desired pattern close together. The spacing should be consistent to help maintain a uniform pattern. Pavers can be cut to fit with a paver cutter or masonry saw.

5. Compact pavers with a mechanical plate compactor until level and firmly in place.

6. Fill joints completely by sweeping Abbotsford Concrete’s joint sand across the surface, then compacting until joints are completely filled. The area is now ready for immediate use.
